Subject: [STAFF] COVID Updates
Attachments: AHA.PDF

Good morning everyone,

Below are a few updates from the CPTF:

1. We have begun to ship N95 masks out to Battelle Decontamination System. The PPE subcommittee has determined that N95 masks need to be decontaminated after 5 uses, however, the wearer may determine what 1 use is. Whether wearing a mask for an entire shift, or a few short times over the course of a few days, it will be the wearer's discretion to determine that use. Each individual is responsible for tracking their uses on their N95 storage container. After 5 uses, please take it to OR to be decontaminated. Ensure your name is clearly marked on the mask, and that the mask is free from make-up and is not soiled. If Battelle feels the mask is soiled or heavily coated with make-up, they will simply discard the mask. Dixie is now issuing new N95s. If you need a new mask, please speak to her when sending a used one to be decontaminated.
2. With ED Rooms 2 and 3 now setup with negative air pressure, the Scope Room in OR has been reconverted for its usual procedures.
3. The American Heart Association has issued guidance for resuming CPR courses as well as clarifying when extension dates will expire for those needed recertification. Please see the attached document for more information. If you are in need of recertification, please reach out to the Education Department to schedule a time for training. Olivia and Shelby can be reached at x2189; Lyndsey can be reached at x1132.

Thanks,
Brian

UPDATED: Interim Guidance on Card Extensions during COVID-19 Outbreak

CPR & EMERGENCY CARDIOVASCULAR CARE

May 20, 2020

Dear Global AHA Training Network,

Beginning in early March, to provide additional flexibility for providers, AHA Instructors, and AHA Training Centers during the COVID-19 pandemic, the AHA issued extensions for AHA Instructor and Provider cards beyond their recommended renewal date, initially for 60 days, then to 120 days. Over the last 3 months, to support you during this challenging time, the AHA has also released guidance on additional precautions, options for healthcare and Heartsaver courses, CPR guidelines, just-in-time ventilation modules for healthcare providers, and is temporarily allowing virtual training through guidance to our Training Center Coordinators.

As the COVID-19 pandemic evolves and Training Centers may be more able to return to training providers and Instructors using options provided by the AHA, we are issuing clarification and updates for card extensions as outlined below.

- AHA Provider and Instructor cards that expired in March and April, and those expiring at the end of May and June can renew their card for up to 120 days from the recommended renewal date on their card. See below for specific recommended renewal and extension dates:

Recommended Renewal Date on Card (end of month)	New Renewal Due Date with 120-day Extension (end of month)
March 2020	July 2020
April 2020	August 2020
May 2020	September 2020
June 2020	October 2020

- **Beginning in July, we will resume normal timelines for renewing cards.** Those with cards expiring at the end of July should plan to renew their cards by the recommended renewal date on their card (July 2020).
- However, for those who may be in affected areas with restrictions still in place into July, Training Centers, at their discretion, may consider extending July cards past their renewal date, for no more than 120 days.
- As always, AHA TCs are responsible for following the instructions from their local government or public health authority as it relates to actions around COVID-19. In accordance with the guidelines

released by local government, the leadership of the TC should use discretion to evaluate the risk of disease transmission in their area before organizing any training events and take necessary precautions to avoid transmissions.

The AHA continues to closely monitor the COVID-19 pandemic and evaluate options for delivering resuscitation education while taking the proper precautions. Our top priority is the safety of both AHA Instructors and learners.

We know that high-quality CPR is the primary component in influencing survival from cardiac arrest. To save more lives, healthcare providers must be competent in delivering high-quality CPR, and patient care teams must be coordinated and competent working together effectively. Although COVID-19 is certainly our most immediate threat, we must remember the ever-lurking dangers of heart disease and stroke – which, year in and year out, are the top two killers worldwide.

As a reminder, the AHA offers many options to help meet your training needs and the needs of your learners. During this time of social distancing, our blended learning or self-directed learning may be good options for your organization. Consider offering blended learning courses such as the AHA's [HeartCode](#) program for BLS, ACLS, and PALS, or [Heartsaver First Aid CPR AED blended learning](#) for non-healthcare providers. Students can complete the online portion of the course and then complete their skills session separately when it is convenient. Self-directed learning and skills competence can be obtained with social distancing outside the classroom with the AHA's [HeartCode Complete](#) and [RQI](#) (Resuscitation Quality Improvement) programs for healthcare providers.

We remain committed to serving you as trusted resource to allow for the continuance of safe, high-quality CPR training, as feasible. Thank you for everything you are doing during this challenging time.

Sincerely,
American Heart Association
